LOVITT TECHNOLOGIES AUSTRALIA

Lovitt Technologies Australia is accredited and operating to Australian Quality Standards (Aerospace and Defence) AS9100 Rev B:2004 and International Quality Standard ISO 9001:2000.

Quality is central to all Lovitt Technologies Australia's activities. The Quality Management System is designed to ensure that our attention to excellence goes beyond meeting design and contractual requirements.

Quality touches every aspect of the order, from quotation through to delivery, including:

- purchasing
- traceability of raw material
- manufacturing and process control
- inspection, testing and verification
- non-conformance, corrective and preventative actions, and
- maintenance of monitoring and measuring equipment, including gauges, verniers, micrometers, and co-ordinate measuring machines (CMMs).

Central to operationalising quality at Lovitt Technologies Australia is the custom-built information technology system, LIMIS. LIMIS delivers real-time data on order tracking, production planning, scheduling, costing and control, and inventory management.

Quality audits are undertaken at regular intervals, complemented by external reviews by accredited standards agencies. Customers are welcome to inspect the quality management system on-site and initiate their own assessment as have Hawker de Havilland, Airbus (UK & France) and Boeing.
