

LOVITT TECHNOLOGIES AUSTRALIA

Taking our history of **tooling**

and tempering it
for tomorrow

Progressive Precision Engineering

Tooling is the history of Lovitt Technologies Australia. We have developed the reputation as a supplier of tooling to both tool users and makers.

Our name is synonymous amongst the plastics and canning industries for supplying quality carbide dies and punches, while the petrochemical industry continues to turn to Lovitt Technologies Australia for quality pelletter blades and die refurbishment. We also have many years experience in the manufacture of cutters, slitting knives, shafts and guides, kneading blocks, granulators, screw elements and barrel sections, from customers' specification.

Complementing our state-of-the-art CNC machining centres is a range of grinding equipment, including surface grinders, profile grinders, rotary grinders, and tool and cutter grinders.

Our long standing commitment to the tooling industry has seen Lovitt Technologies Australia develop strong relationships with customers. We work with customers to provide insight into manufacturability issues on the basis of their design.

Extensive materials handling capabilities enable us to manufacture tooling from a wide range of metals and composite materials including high-speed steels, tungsten carbide, and ceramics.
