

Acknowledging value-added services

as the next opportunity
to deliver more

LOVITT TECHNOLOGIES AUSTRALIA

Many customers are looking for more than machined parts from their precision engineering service providers.

Today, markets demand a streamlined supply chain. There must be fewer suppliers, who take on more responsibility and solve a greater number of problems. They must be prepared to take on projects, manage them to completion, and deliver. Suppliers must be more than just service providers, they must be solutions providers.

Firstly, we offer unparalleled flexibility in sourcing and machining a wide range of raw materials, meeting your prototype or production volume requirements, and offering innovative supply arrangements. We complement this with in-house mechanical assembly facilities.

Secondly, we provide complete solutions which marry our expertise in precision machining with the offerings of industry leaders in the allied areas of:

- castings, forgings and fabrications
- mechanical and electrical assembly
- surface treatment (e.g. plating, painting, alodining, anodizing, water-proofing), and
- heat treatment and specialised testing.

Should your project require technical services of a different nature, we welcome your approach and the opportunity to form a new relationship with a supplier of choice.

The relationships we have established with both local and offshore suppliers allow us to extend our services to a global audience, and give us the flexibility to truly address our customers' unique requirements.

The integration of value-added services into our offering differentiates Lovitt Technologies Australia from other precision engineering houses. Having established our ability through aerospace and defence contracts, a project management team is ready to assist commercial customers with future requirements in this area.
